US-09-659-791A-36/C

Sequence 16, Application US/09659791A

Patent No. 6383808

GENERAL INFORMATION:

APPLICANT: Brett P. Monia

TITLE OF INVENTION: ANTISENSE MODULATION OF CLUSTERIN EXPRESSION

TITLE REPERENCE: RTS-0156

CURRENT APPLICATION NUMBER: US/09/659,791A

CURRENT PILING DATE: 2000-09-11

NUMBER OF SEQ ID NOS: 90

SEQ ID NO 36

LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 35, Application US/09659791A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GENERAL INFORMATION:
Patent No. 638808
GENERAL INFORMATION:
PAPLICANT: Brete P. Monia
TITLE OF INVENTION: ANTISENSE MODULATION OF CLUSTERIN EXPRESSION
TITLE OF INVENTION: ANTISENSE MODULATION OF CLUSTERIN EXPRESSION
TITLE OF INVENTION: ANTISENSE NOOULATION OF CLUSTERIN EXPRESSION
CURRENT APPLICATION NUMBER: US/09/659,791A
CURRENT FILING DATE: 2000-09-11
SEQ ID NO 41
LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NS-09-659-791A-40/C

Sequence 40, Application US/09659791A

Patent No. 633808

GENERAL INFORMATION:
PAPPLICANT: Sueet P. Monia
APPLICANT: Suean M. Freier

TITLE OF INVENTION: ANTISENSE MODULATION OF CLUSTERIN EXPRESSION
FILE REPRENCE: RTS-0156

Sequence 66, Application US/09659791A

Patent No. 6383808

GENERAL INFORMATION:

APPLICANT: Brett P. Monia

APPLICANT: Brett P. Monia

APPLICANT: Brett P. Monia

APPLICANT: Susan M. Freier

TITLE OF INVENTION ANTISENSE MODULATION OF CLUSTERIN EXPRESSION

FILE REFERENCE: RTS-0156

CURRENT APPLICATION NUMBER: US/09/659,791A

CURRENT FILING DATE: 2000-09-11

NUMBER OF SEQ ID NOS: 90

SEQ ID NO 66

LENGTH: 20

Sequence 72, Application US/09659791A

Patent No. 6383808

GENERAL INFORMATION:
APPLICANT: Susan W. Freler
TITLE OF INVENTION: ANTISENSE MODULATION OF CLUSTERIN EXPRESSION
FILE REFERENCE: RTS-0156
CURRENT APPLICATION NUMBER: US/09/659,791A
CURRENT FILING DATE: 2000-09-11

NUMBER OF SEQ ID NOS: 90

SEQ ID NO 72

LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                US-09-659-791A-73/C

US-09-093-972C-944, Application US/09093972C
; Sequence 944, Application US/09093972C
; Patent No. 6825174
; GENERAL INFORMATION:
; GENERAL INFORMATION: COMPOSITION, FORMULATIONS & METHOD FOR PREVENTION
; TITLE OF INVENTION: CAPPOSITION, FORMULATIONS & INFLAMMATION
; REALIGED ALLOCATE OF DISEASES & CONDITIONS ASSOCIATED WITH BRONCHOCONSTRICTION, ALLERGY (IES) & INFLAMMATION
                                                COMPOSITION, FORMULATIONS & METHOD FOR PREVENTION & TREATMENT OF DISEASES & CONDITIONS ASSOCIATED WITH BRONCHOCONSTRICTION, ALLERGY(IES) & INFLAMMATION
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

Squence 151, Application US/09180437

Patent No. 6251873

GENERAL INFORMATION:

APPLICANT: FUKUSARO, Shioji

APPLICANT: WORSYAM, Yoshifumi

APPLICANT: MORUYAMA, Takeshi

TITLE OF INVENTION: Antisense Compounds to CD14

FILE REFERENCE: 1110-209P

CURRENT APPLICATION NUMBER: US/09/180, 437

CURRENT APPLICATION NUMBER: 1909-09318 JARLIER FILING DATE: 1998-11-06

BARLIER APPLICATION NUMBER: 09-05318 JARN

BARLIER FILING DATE: 1997-03-07

NUMBER OF SEQ ID NOS: 289

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 151

Sequence 75, Application US/09736116

Patent No. 6727085

GENERAL INFORMATION:
APPLICANT: Sejeragard, Tina
APPLICANT: Mikkelsen, Frank
TITILE OF INVENTION: Subtilase variants having an improved wash peformance on egg stall
FILE REPERENCE: 6108-410
CURRENT APPLICATION NUMBER: US/09/736,116
CURRENT FILING DATE: 2001-05-24
NUMBER OF SEQ ID NOS: 105
SOFTWARE: PatentIn version 3.0
SEQ ID NO 75
LENGTH: 15

DESCRIPTION: third strand derived from dystrophin
DESCRIPTION: sequence region in Seq ID No. 586124431
HYPOTHETICAL: Yes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 67, Application US/09034205
Patent No. 619419
